Subject Index

A

Acetate concentration monitoring, fed-batch cultures, 187
Acid mine water, reclamation of, 43
Acid-treated protein, hydrolysis of, 535
Actinomycetes, distribution of, in soil, 367
Activated sludge, 207
Activated sludge, phosphate removal by, 657
Acyl-enzyme complex, reaction mechanism through, 71
Adsorption equilibrium, between α-amylase and immuno-adsorbent, 625
Alcohol fermentation, simultaneous with saccharification, 427
Alkali treatment, of lignocellulosics, 681
Allyl-isothiocyanate, 347
Amino acid, in grapes and wines, 597
AMP deaminase, *Candida boidinii* defective in, 591
Anaerobic bacteria, 389
Anaerobic digester slurry, of animal waste, 43
Anaerobic treatment, of acid mine water, 43
L-Arginine producer, isolation and characterization of, 279
L-Arginine producer, of *Corynebacterium*, L-arginine producer of, 279, 285
L-Arginine production, by continuous culture, 279, 285
L-Arginine production, factors affecting, 285
Aroma production, by *Trichoderma viride*, 403
Aspergillus niger, diploids and haploids of, citric acid production by, 375
Aspergillus niger, growth kinetics of, 57
Aspergillus niger, hydroxylation of 2-santonin by, 51
Aspergillus niger, naringinase of, 193
Aspergillus niger, protease production by, 383
Aspergillus oryzae, enzyme production by, 525
Aspergillus oryzae, glutaminase production by, 137
Aspergillus oryzae, γ-glutamylglycylglycine formation by, 299
Aspergillus terreus, flocculation of, 433
Aspergillus terreus, itaconic acid production by, 433
Aspergillus usamii, a new mutant of, 333
Aspergillus usamii mut. *shiro-usamii*, a high citric acid producing mutant, 111
ATP production, by methanol yeast, by an AMP deaminase-impaired mutant, from AMP, 591

B

Bacillus licheniformis, production of bacitracin by, 85
Bacillus macerans, cyclodextrin glucanotransferase from, 159
Bacillus sp. BA-3796, D-glucose-l-phosphate production by, 649
Bacillus stearothermophilus, neutral protease from, 13
Bacitracin, production by fed-batch culture, 85
Backwashing, cross-flow filtration with, 199
Baker's yeast, propioin synthase from, 7
cis-Benzeneglycol, production of, 313
cis-Benzeneglycol, production of, as a precursor for polyparaphenylene, 305
Biomass support particles, immobilization of cells within, 441
Biomass supporting particles, immobilization within, 567
Biomethanation, by *Methanobacterium thermoautotrophicum*, 235
Biomethanation, of H_2 and CO_2, 235
Bioreactor, 423
Biotransformation, of benzene to *cis*-benzeneglycol, 305
Blue pigment, production of, 1
Breakthrough curve, in immuno-affinity chromatography, 625
Breeding, of citric acid producers by protoplast fusion, 375
Brevibacterium fuscum, α-hydroxysteroid dehydrogenases of, 145
Brewer's yeast, genetic analysis of non-sporulating phenotype, 605

C

Candida boidinii, AMP deaminase-impaired mutant of, ATP production by, 591
Candida boidinii, enrichment of methionine in cells of, 643
Candida boidinii, methanol yeast, 517
Candida boidinii, methionine-enriched mutant of, 153
Candida sp., growing on sardine oil, 273
Carbon conversion efficiency, in glucose and lactose consumption, 449
Carbon dioxide evolution rate, anaerobic growth-estimation of *Saccharomyces cerevisiae* by, 667
Carbon dioxide evolution rate, monitoring of, 173
Cassava starch, digestion by *Rhizopus* glucoamylase, 397
Cassava starch, raw, digestion by glucoamylase, 545
Cell wall, copper reduction by, 257
Cell wall, of *Saccharomyces cerevisiae*, 251
Cell wall mutant, of *Saccharomyces cerevisiae*, 245
Cellulase, production by *Clostridium*, 389
Ceramic filter, with backwashing, cross-flow filtration with, 199
Chinese hamster ovary cells, suspension culture of, 501
Chitin-immobilized naringinase, 193
Chlorella pyrenoidosa, 19
Chrysosporium pannorum, inulinase of, 553
Circulation time, in fermentor, 103
Circulation time distribution, 355
Citric acid fermentation, by *Aspergillus niger*, 375
Cloning, of glyoxalase I gene, 495
Clostridium, cellulase production by, 389
CMCase, of *Clostridium*, 389
CO_2-dependent method, control of glucose feeding by, 85
Compost, of urban refuse, 577
Composting, of household organic waste, 37
Computer controlled fermentation system, 239
Computer registration, of fermentation activity, 239
Conjugal transfer, of plasmid, 63
Continuous culture, L-arginine production by, 279, 285
Continuous culture, of *cis*-benzeneglycol producing mutant, 313
Continuous culture, of plasmid-bearing microorganisms, 63
Cooling, of solid-state cultures, 675
Co-oxidation, of benzene by *Pseudomonas*, 313
Copper reduction, by yeast cell wall, 257
Copper uptake, by *Debaryomyces hansenii*, 257
Corynebacterium acetoacidophilum, L-arginine producer of, 279, 285
Cross-flow filtration, 633
Cross-flow filtration, of yeast, with ceramic filter, 199
Cryptococcus lactativorus, a yeast, 615
Crystallization, of thermostable neutral protease, 13
Culture condition, of *Aspergillus oryzae*, for hyperproduction of peptidase, 525
Cyclodextrin, 159
Cyclodextrin glucanotransferase, of *Bacillus macerans*, 159

D

Debaryomyces hansenii, reduction and uptake of copper, 257
Dehydrocholic acid conversion, by α-hydroxysteroid dehydrogenases, 145
Dehydrodivanillin, degradation of, 341
Deletion mutant, of pock-forming plasmid pSAl, 213
Denitrification, by photosynthetic bacteria, 27
Deoxyglucose-resistant mutant, glucoamylase production by, 545
Depression, of synthesis of linoleyl residue by NaCl, 461
Dextrin, from potato strch, 159
Direct labor cost, 93
Dynamic behavior, of activated sludge, for step change of Mg feed, 657

E

Ecological factors, affecting on actinomycete flora, 367
Eh-stat, batch culture of *Methanosarcina barkeri*, 123
Elocculation of *Aspergillus terreus*, 433
Elution profile, of immuno-affinity chromatography, 625

Energetics, of denitrification and photosynthesis, 27
Enrichment cultures, for psychrophilic methane fermentation, 229
Enzymatic conversion, of dehydrodivanillin, 341
Erythroid differentiation factor, production of, from gene-engineered chinese hamster ovary cell, 501
Ethanol, production from lactose by *Zymomonas mobilis*, 409
Ethanol fermentation, by *Zymomonas mobilis*, 167
Ethanol fermentation, from cellulose, 509
Ethanol production, by a thermophilic *Clostridium* sp., 467
Ethanol production, by immobilized yeast, from cane chips, 423
Ethanol production, by thermophilic yeast, 173
Ethanol production, by *Zymomonas mobilis*, 219
Ethanol production, from cellulose, 467
Ethanol production, from glucose, fructose and sucrose, 219
Ethanol production, from wheat flour, 167
Ethanol tolerance, of *Pichia stipitis*, 417
Excess sludge, produced from fish-processing wastewater treatment, 229
Extracellular glutaminase, from *Aspergillus oryzae*, 299
Extraction, of acrid compounds, 347

F

Fatty acid, effect on josamycin production, 559
Fed-batch cultures, of recombinant *Escherichia coli*, 187
Feedback control, with supply of gaseous substrate, 235
Fermentation activity, of microorganisms, 239
Fixed-bed reactor, methane production in, 235
Flavobacterium, promoter region of, 489
Fluorometric measurement, of proline, 597
Fosfomycin hypersensitive mutant, from *Staphylococcus aureus* Newman, 640
Friend cell differentiation, 501
Fusarium oxysporum, as SCP mold, 449

G

G-418 resistance marker, 481
D-Galactitol, oxidation of, 225
Gamma-ray, pretreatment of lignocellulosics by, 681
Gas-phase feed, of benzene vapor, 313
Gene expression, of nylon oligomer hydrolase, in *Escherichia coli*, 489
Genetic analysis, of non-sporulating phenotype of brewer's yeasts, 605
Glucan, from yeast cell wall mutants, 251
Glucoamylase, coimmobilization with *Saccharomyces cerevisiae*, 427
Glucoamylase, production by mutant of *Rhizopus* sp., 545
Glucoamylase, production by *Rhizopus* sp. in liquid culture, 397
Glucose, effect on bacitracin production, 85
Glucose, effect on lipase production, 441
Glucose-dehydrogenase-poly (ethyleneglycol)-NAD conjugate, as an NADH-regeneration unit, 267
α-D-Glucose-l-phosphate, antibacterial activity to *Staphylococci*, 649
α-D-Glucose-l-phosphate, production from *Bacillus* sp. BA-3796, 649
β-Glucosidase, of *Clostridium*, 389
Glutamic acid, formation of, from protein, 535
Glutaminase, from *Aspergillus oryzae*, 137
Glutaminase, purification and properties of, 137
γ-Glutamylglycylglycine formation, by *Aspergillus oryzae* glutaminase, 299
γ-Glutamylglycylglycine formation, by extracellular glutaminase, 299
Glyceride-enzyme complex, reaction mechanism through, 71, 567
Glyoxalase I gene, cloning of, 495
Grapes, proline in, 597
Green alga, hydrogen photoproduction by, 19
Growth yield, of photosynthetic bacteria, 27
Growth-estimation model, in solid-state fermentation, 667

H

Hansenula polymorpha, temperature-sensitive mutants of, 455
Haploidization, of diploids of *Aspergillus*

niger, 375
Heavy metals, removal of, 43
2-Heptanone, produced by *Trichoderma viride*, 403
Hexose phosphate transport system, constitutive for, 649
High cell mass concentration, economic significance of, for metabolite production, 93
High citric acid producing mutant, *Aspergillus usamii* mut. *shiro-usamii*, 111, 333
Host-vector system, in *Zygosaccharomyces rouxii*, 481
Human interleukin-2, production by *Escherichia coli*, 181
Humification index, 577
Hydrogen, production of, 19
α-Hydroxysteroid dehydrogenases, of *Brevibacterium fuscum*, 145

I

L-Iditol production, by methanol yeast, 517
Immobilized methylotroph, L-serine production by, 291
Immobilized yeast, with Al alginate, 423
Immuno-affinity chromatography, purification of recombinant α-amylase by, 625
Inclusion complex, 347
Inducer, for blue pigment production, 1
Inhibition of cell growth, by acetate, 187
Inhibition, of *cis*-benzeneglycol production by sugars, 305
Inhibition of spore formation, by pock-forming plasmids, 213
Inosine, production of, from 5′-inosinic acid, 585
5′-Inosinic acid, microbial conversion of, 585
Interesterification, kinetics of, of oils and fats, 71
Interesterification, using dried cells, 441
Interesterification of fats and oils, by immobilized fungus, 567
Interleukin-2, N-terminal methionine free molecule of, 181
Inulin and Jerusalem artichoke extract, hydrolysis of, 553
Inulinase, from *Chrysosporium pannorum*, 553
Inulinase-producing fungi, isolation from soil, 553
Inulinase production, culture conditions for, 553
Inverted repeat, in promoter region, 489
Iodine staining, 159
Isolation, of a new strain of *Clostridium*, 389
Isoprenoid compounds, production of, 323
Itaconic acid, production by *Aspergillus terreus*, 433

J

Josamycin fermentation, removal of product inhibition on, 559

K

7-Ketochenodeoxycholic acid formation, by α-hydroxysteroid dehydrogenases, 145
Koji, prepared with high acid producing mutant, 333

L

Lactose, fermentation by *Zymomonas mobilis*, 409
Light intensity distribution, within a culture vessel, 19
Lignocellulosics, saccharification of, 681
Linoleyl residue, of *Zygosaccharomyces rouxii*, 461
Lipase, production by *Rhizopus chinensis*, 441
Lipid composition, of a *Candida* sp., 273
Lipid composition, of temperature-sensitive *Hansenula polymorpha* mutants, 455

M

Magnesium content, in activated sludge solid, 657
Magnesium, requirement, for biological phosphate removal, 657
Mannan, from yeast cell wall mutants, 251
Mass and energy balance, in *Fusarium oxysporum*, 449
Mating-type genes, of brewer's yeast, 605
Metal ions, effect on the production of human interleukin-2, 181
Methanation, of methanol, 123
Methane, production by methanogenic bacteria, 117
Methane fermentation, at low temperature, 229

Methane production, by enrichment culture, 229
Methanol, methane fermentation from, 117
Methanobacterium thermoautotrophicum, methane production by, 235
Methanol yeast, ATP production by, 591
Methanol yeast, L-iditol production by, 517
Methanol yeast, production of methionine-enriched cells of, 643
Methanol-utilizing bacteria, *Protomonas extorquens*, 323
Methanosarcina barkeri, methanation of methanol by, 123
Methionine, enrichment in *Candida boidinii* cells, 153
Methionine, enrichment in methylotrophic yeast cells, 643
Methionine aminopeptidase, of *Escherichia coli*, 181
Methylation analysis, of high molecular weight dextrins, 159
Methylglyoxal, detoxification of, 495
Methylotroph, production of methionine-enriched cells of, 643
Methylotrophic yeast, enrichment of methionine in, 153
Microaqueous system, for enzymatic reaction, 71, 567
Microbial transformation, 51
Microbial-flora, in *tou-pan-chiang*, 473
Microfiltration module, 633
Microflora, in soils, 367
Mirin-making, at low alcohol concentration, 333
Mirin-making, with special *koji*, 333
Mixing region, in fermentor, 103
Mobilization, of non-conjugative plasmid, 63
Monoclonal antibody, immuno-affinity chromatography using, 625
Morphology, of *Saccharomyces cerevisiae*, 245
Mutagenesis, with chemical mutagen or transposon, 305
Mutation, improvement of ethanol production by, 467
Mutation, of methanol yeast, for the improvement of ATP production, 591
Mycobacterium smegmatis, D-tagatose production by, 225
Mycobacterium smegmatis, xylitol production by, 33

N

NADH-regeneration unit, 267
Naringinase, from *Aspergillus niger*, 193
Naringinase, from *Penicillium* sp., 193
NAD(P)H-linked aldose reductase, from *Cryptococcus lactativorus*, 615
Naringinase, immobilization of, 193
Naringinase, stability of, 193
New kind of *mirin*, with sour taste, with much flavor, 333
New kind of *saké*, with fresh sour taste, with a good aroma, 111
Non-Newtonian fluid, mixing of, 103
Nylon oligomer hydrolase, 6-aminohexanoic acid linear oligomer hydrolase, 489

O

Optimum temperature, of saccharification of cellulose, 509
Organic waste, thermophilic composting of, 37

P

Parasexual cycle, of *Aspergillus niger*, 375
Pediococcus halophilus, salt-tolerant cells, 633
Penicillium sp., varinginase of, 193
pH-stat, control of glucose feeding by, 85
pH-stat, with microtitration method, 239
Phosphate, removal by activated sludge, 657
Phosphate release, from cells under anaerobic state, 207
Phosphate removal, by pure and mixed cultures, 207
Phosphate uptake, in aerobic-anaerobic activated sludge process, 657
Phosphorus removal, in A/O activated sludge process, 207
Photoheterotrophic growth, of *Rhodobacter sphaeroides*, 27
Photoproduction, by *Chlorella pyrenoidosa*, 19
o-Phthalaldehyde, oxidized proline with, 597
Pichia stipitis, ethanol tolerance of, grown on a sugar mixture, 417
Plasmid, RSF2124, R100-1, 63
Pock-forming plasmids, properties of, 213
Polyelectrolyte complex, flocculation of

Aspergillus terreus with, 433
Polysaccharides, in cell wall of *Saccharomyces cerevisiae*, 251
Product inhibition, its removal of josamycin production, 559
Proline, fluorometric measurement of, 597
Promoter-like region, in *Flavobacterium*, 489
Propioin, from propionaldehyde, 7
Propioin synthase, a new enzyme from baker's yeast, 7
Propionaldehyde, propioin formation from, 7
Proteases, from *A. oryzae*, 525
Protease, production of, 13
Protease, semi-alkaline, production of, 383
Protein extractability, for *Saccharomyces cerevisiae* mutants, 245
Proteolysis, of acid treated protein, 535
Protomonas extorquens, a methylotroph, 291
Protomonas extorquens, ubiquinone production by, 323
Protoplast fusion, of *Aspergillus niger*, 375
Pseudomonas, degrading aromatics compounds, 305
Pseudomonas aeruginosa, phosphorus removal by, 207
Psychrophilic methane fermentation, of excess sludge, 229
Purification, of α-amylase, 633
Purification, of glutaminase from *Aspergillus oryzae*, 137
Purification, of α-hydroxysteroid dehydrogenases, 145

R

Raw cassava starch, digestion by *Rhizopus* glucoamylase, 397
Raw material cost, in microbial reaction process, 93
Recombinant *Escherichia coli*, culture conditions of, 181
Recombinant *Escherichia coli*, fed-batch cultures with acetate concentration monitoring, 187
Recombinant plasmid, Lac$^+$, 409
Redox potential, influence on methanation of methanol, 123
Reduction of D-glucose and D-xylose, by aldose reductase, 615
Reduction of ketose, by aldose, by aldose reductase, 615
Regulation, of secondary metabolism, 1
Repeated production of L-serine, 291
Rhizopus chinensis, for lipase catalyst, 71, 567
Rhizopus chinensis, lipase production by, 441
Rhizopus glucoamylase, production in liquid culture, 397
Rhizopus sp., production of glucoamylase by, 545
Rhodobacter sphaeroides S, denitrification by, 27
Rice bran, production of *Rhizopus* glucoamylase with, 397
Running cost, in microbial reaction process, 93

S

Saccharification, of lignocellulosics, 681
Saccharomyces cerevisiae, cell wall mutants of, 245
Saccharomyces cerevisiae, cell wall polysaccharides of, 251
Saccharomyces cerevisiae, coimmobilization with glucoamylase, alcohol fermentation by, 427
Saccharomyces cerevisiae, ethanol fermentation by, separation of, 199
Saccharomyces cerevisiae, glyoxalase I gene from, 495
Saccharomyces cerevisiae, growth on solid medium, 667
Saccharomyces cerevisiae, respiration deficient mutant of, 173
Saké brewing, with special *koji*, 111
Salt-tolerant cells, of *Pediococcus halophilus*, 633
Salt-tolerant yeast, *Zygosaccharomyces rouxii*, 461
α-Santonin, microbial hydroxylation of, 51
Sardine oil, yeast growth on, 273
Semi-alkaline protease, of *Aspergillus niger*, 383
L-Serine production, from methanol and glycine, by immobilized methylotroph, 291
Sesquiterpene lactone, 51
Shear stress, effect of, on xanthan gum production, 355
Simultaneous saccharification and fermentation, of cellulose, 509
Sodium chloride, depression of fatty acyl residues by, 461
Soil actinomycetes, 367

Solid culture, of *Aspergillus oryzae*, 525
Solid-state culture, of *Aspergillus niger*, 57
Solid-state cultures, of thermophilic fungi, 675
Solid-state ethanol fermentation, 173, 667
D-Sorbitol production, by *Cryptococcus lactativorus*, 615
L-Sorbose, L-iditol production from, 517
L-Sorbose, induction of D-galactitol oxidation enzyme by, 225
Soy sauce manufacturing, with enzyme preparation, 525, 535
Sporulation, of brewer's yeast, 605
Stability, of plasmid-bearing microorganisms, 63
Stabilization degree, of composting, 577
Stirred tank, xanthan gum production in, 355
Streptomyces aureus, inosine production by, 585
Streptomyces azureus, pock-forming plasmids of, 213
Streptomyces narbonensis var *josamyceticus*, josamycin fermentation by, 559
Streptomyces sp., blue pigment production by, 1
Stripping of ethanol, by inert gas circulation, 173
Submerged culture, of *Aspergillus oryzae*, 525
Sugar, extracted from cane chips, 423
Sugar beet pulp, fermentation of, 675
Sugarcane bagasse, mold growth on, 57
Sulfate, removal of, 43
Sulfide production, by sulfate reducing bacteria, 117
Supercritical CO_2 extraction, 347
Suspension culture, of Chinese hamster ovary cells, 501
Symbiotic effect, on biological removal of phosphate, 207

T

D-Tagatose, production from D-galactitol, 225
Taxonomy, based on ubiquinone, 323
Temperature profiling, 509
Temperature-sensitive mutants, of *Hansenula polymorpha*, 455
N-Terminal methionine-free molecule, of recombinant human interleukin-2, 181
Thermophilic bacteria, 389
Thermophilic *Clostridium* sp., ethanol production by, 467
Thermophilic composting, effect of seeding on, 37
Thermophilic yeast, ethanol fermentation by, 173
Thermostable aldose reductase, from *Cryptococcus lactativorus*, 615
Thermostable neutral protease, from *Bacillus stearothermophilus*, 13
Thermotolerant yeast, *Hansenula polymorpha*, 455
Thiostrepton production, by *Streptomyces azureus* ATCC 14921 and its mutants, 213
Tou-pan-chiang, micro-flora during the aging of, 473
Toxicity, of benzene to *cis*-benzeneglycol producing mutant, 313
Transformation, of Leu$^-$ host, 481
Trichoderma viride, aroma production by, 403
Turbine impeller, mixing by, 103
Two-stage cultivation, economic consideration of, 93

U

Ubiquinone, production of, 323
Ubiquinone increased mutant, 323

V

Vanillin, formation of, 341

W

Water activity, on the aroma production, 403
Wheat bran *koji* culture, with enzyme preparation, 525
Wheat flour, for ethanol production, 167
Whey, fermentation by *Zymomonas mobilis*, 409
Wines, proline in, 597

X

Xanthan gum, production of, 355
Xanthan gum solution, mixing state of, 103
Xanthomonas campestris ATCC 13951, 355
Xylitol, production from D-xylulose, 33
D-Xylose, xylitol production from, 33
β-Xylosidase, of *Clostridium*, 389
D-Xylulose, reduction of, 33

Y

Yeast, *Zygosaccharomyces rouxii*, 481

Yeast cell size, regulation of, 495

Z

Zygosaccharomyces rouxii, osmophilic yeast, host-vector system in, 481
Zygosaccharomyces rouxii, synthesis of linoleyl residues by, 461
Zymomonas mobilis, ethanol production by, 219
Zymomonas mobilis, fermentation of lactose by, 409
Zymomonas mobilis, for ethanol production, 167
